Re: Fabric Testing with Kit C-A-T

Dear Linda,

Thank you very much for testing four of our most popular tent top and sidewall fabrics. Over the past 20 years we have evaluated many methods of washing tents. Many cleaning methods are very rough on the fabric and can greatly shorten the serviceable life of the fabric. You subjected the samples to 20, 40, 60, 80, 100 and 120 washing cycles with the Kit C-A-T washing machine, had the testing certified, and returned the samples to us for evaluation. The report from our laboratory states, "We were unable to see any detrimental effects from the washings."

Based on the above testing we would highly recommend the Kit C-A-T washing machine, when used according to the manufacturers instructions, for John Boyle Tent Fabrics.

Best regards,

Wm. W. White
