Kit C-A-T Your washing machine for tent tarps

Dear Mr. and Mrs. Watts,

Thank you for testing our acrylic and PVDF top coated POLYMAR® tenting materials with your washing machine Kit C-A-T.

We received samples, which have gone 20, 40, 60, 80, 100 and even 120 times through your washing machine. Mehler Haku's laboratories investigated the influence of the washing cycles on the quality of the membrane material.

We are very happy to confirm, that even after 120 washing cycles at your machine, the material looks as brand new. There is no loss on strength or flexibility. The function of the top coat (acrylic as well as PVDF) is still outstanding.

Thank you for the tests and all the best with the marketing of this machine.

Best regards

MEHLER HAKU GMBH
