**Dear Linda  
Dear Jamie**

**please find enclosed the results of the last tests we made with our products washed with your Kit C-A-T.**

**These tests are weathering tests. 1000 hours in this QUV are the same as 1,5 years in the nature.**

**We have tested Quality B 1017 washed 80 full cycles, Quality B 1015 washed 100 full cycles and Quality B 1017 washed 100 full cycles.**

**After 4000 hours (= 6 years in the nature) there are no differences to the virgin samples.**

**This is again a result how excellent your Kit C-A-T is working.**

**Kind regards**

**Andreas Wilhelm**

Dear Linda  
Dear Jamie

You have washed our tent material with different types of lacquer 20, 40, 60, 80, 100 and 120 full cycles in the Kit C-A-T.

We made several tests with all test samples returned and can summarize these tests as follows:

Test	Results
Cleaning behaviour	Microscopic cracks on some samples but still good cleaning behaviour
Surface	No difference to original
Brilliance	No difference to original
Weathering	No results because of a longer period (about 6 months) (We do not expect any difference)

We can confirm that with you're the Kit C-A-T there will be no damage to the material.

You have already received our complete documentation and can use it to show how excellent the Kit C-A-T is working.

Regards

Andreas Wilhelm
